

Florida Gallery Installs State-of-the-Art Air Purification System

RCK Gallery, Stuart, Fla.

Charting out plans for a safe reopening for clients and employees, RCK Gallery in Stuart, Fla. prioritized air quality upgrades throughout their welcoming exhibition space. The neighborhood gallery is a hub for showcasing and celebrating local and regional artists and their team hosts frequent events and openings that bring together creatives and art enthusiasts.

Contractor QCII recommended installing an ISO-Aire RSH800 hanging unit, a ducted filtration solution engineered with three levels of medical-grade clean air technology including a 12-inch deep medical-grade HEPA, UVC sterilization, and ozone-free bipolar ionization. When combined the components capture and destroy 99.99% of potentially harmful pathogens and air contaminants including viruses and emerging variants, as well as influenza, bacteria, mold, pollen, dust, and VOCs. Several other requirements included a powerful solution that could deliver on multiple air changes per hour (ACH), yet was quiet and nondisruptive. And, the team was drawn to the low-profile ISO-Aire hanging model versus a floor-set purifier, which could take over prime gallery floor space.

ISO-Aire hanging and floor-set models deliver proven COVID-19 mitigation strategies recommended for indoor air quality established by ASHRAE and the Centers for Disease Control. In addition, ISO-Aire is:

- Easy-to-install and maintain;
- Quiet, innovative and long-lasting, designed with power-driven, medical-grade components;
- Designed to "scrub" the indoor air effectively 24/7;
- Engineered strategically to continuously pull contaminants away from the source toward the unit, then distribute clean, sanitized air throughout the room.

3 Layers of Clean Air Protection

HEPA (99.99% at .3 microns)

Ozone-free bipolar ionization

UVC Sterilization

With both hanging and floor-set model options, ISO-Aire can be seamlessly installed in almost any commercial space configuration from church sanctuaries to classrooms. The RSH800 hanging unit inside RCK Gallery offers three layers of unmatched medical-grade filtration to capture and destroy 99.99% of pathogens and microscopic indoor air contaminants including mold, pollen, dust, VOCs, and smoke.
